

Project Case Study

The Challenge

To achieve a blackened steel finish on a fully fabricated large feature reception desk which should exude elegance and sophistication, complementing the overall design of the reception area, and creating a lasting impression on visitors. The finish should be resistant to scratches, stains, and general wear and tear, whilst maintaining its appearance even with regular use.

The Solution

Bradleys rose to the challenge and used Burnished Steel from its SteelAge Range that met the aesthetic, durability, and functionality requirements of the reception desk.

The chemical blackened-effect desk turned out to be a superb asset to the reception area. Its durability and functionality ensure that it serves as a practical workspace while making a lasting impression on visitors. SteelAge is a significantly more controllable alternative to chemical blackening providing a durable and robust finish.

The Detail

Bankside Yards is located on London's South Bank, adjacent to the iconic Tate Modern. It encompasses a vibrant blend of residential, commercial, and cultural spaces, fostering a dynamic urban environment. With a commitment to sustainability and a focus on community engagement, it exemplifies a modern and inclusive approach to urban development in the heart of London.

Project Data

Architect:	PLP Architecture
Location:	Blackfriars Road, SE1
Sector:	Office
Completion:	2022
Items Coated:	Reception Desk & Signage
Substrate:	Mild Steel
System:	<u>Metalite</u>
Durability:	20+ Years Internal
Finish:	Burnished Steel
