

Project Case Study

The Challenge

The key client requirement was to create rust style planters for their outdoor terrace which didn't cause staining on the newly laid slabs. Corten was not going to work as it would bleed onto the ground and also come off onto guests' hands and clothes.

The Solution

Bradleys used a Rust-effect finish from their Oxide Range which is totally stable in the outdoor environment. It is a sealed finished and highly durable to the weather and whilst protecting the steel underneath, will not bleed onto the slab work. It also gives an instant rust effect, so time is not lost waiting for it to oxidise.

The Detail

Based in rural Suffolk, this exclusive private residence is set in the heart of the countryside with an unrivalled outlook of beautiful green valleys. The rust-effect planters helped to frame the vast terrace area and views.

Project Data

Location:	Suffolk
Sector:	Private Residence
Completion:	2019
Items Coated:	Planters
Substrate:	Steel
System:	<u>Oxide</u>
Durability:	20 Years External
